

Over hersenstam, somatisch en psychisch

SUMMARY.

Chapter I. A short review is given of the close affinity between psyche, soma and brain stem. Special attention is drawn to the close connection between psyche and autonomic nervous system.

We have to see in the brain stem the place where the emotional mental life intervenes in the functions of the autonomic nervous system (VAN DER SCHEER, PALIES). The most important somatical reactions connected with emotions and other psychical processes are discussed.
